

3.1

THE MIRROR Observing my own feed | 20 minutes | Individual, in silence

Instructions: Open Instagram, TikTok, or YouTube on your phone. Scroll through the feed for 2 to 3 minutes before responding. Do not post or like—simply observe. For each question, there is a "case mirror": the same question applied to what happened to Mariana. Use this connection to guide your response.

■ Instagram ■ TikTok ■ YouTube ■ Other:

Name: _____

Platform under observation: _____

A — WHAT DOMINATES MY FEED

1

Which themes and topics appear most frequently in your feed? List the top 3 to 5..

Case snapshot: What themes dominated Mariana's YouTube feed regarding technology and diversity?

2

What types of creators or profiles appear most frequently? (gender, ethnicity, geographic origin, field of activity)

Case snapshot: What type of person appeared as a role model for leadership and success in Mariana's feed?

B — WHAT IS MISSING

3

What voices or perspectives are missing from your feed, but which you think should be there?

Case snapshot: What voices were missing from Mariana's feed that could have changed her opinion on algorithms and diversity?

4

If you were to search for content on AI bias or algorithmic discrimination right now, would your feed show you that spontaneously? Why?

Case snapshot: Did Mariana's feed ever recommend content about data racism or algorithmic bias? What does this mean?

C — FEEDBACK AND STANDARD

5

Can you identify an emotional pattern in your feed? (anger, inspiration, entertainment, anxiety, motivation...)

Case snapshot: What emotion did Mariana's feed likely reinforce over the course of hundreds of hours of videos about startups and the IT market?

6

Which category of bias best explains what you observed in your feed data, design, or feedback bias? Justify your answer.

Case snapshot: Which category of bias best explains what happened to Mariana? Write down your hypothesis to discuss in the group.

Before swapping phones with your classmate, reread your answers. Mark the discovery that surprised you the most with an asterisk (*).

3.2

THE SHOCK OF THE DIFFERENT: Observing a colleague's feed | 20 minutes | Device swap

Instructions: Swap phones with a classmate. Examine their feed with the same critical eye you applied to your own. Do not like, post, or change any settings. Scroll for 2 to 3 minutes before answering. The central question of this phase is: if two feeds can be so different, what does that mean for someone who—like Mariana—relied on a single feed for information for years?

Your name: _____ The analyzed feed is from: _____ Platform: _____

D — COMPARING WORLDS

7

What themes and profiles dominate your colleague's feed? How does that feed differ from yours?

Case snapshot: How did Mariana's feed differ from what a feed with diverse representation in the technology sector would look like?

8

Is there something in a colleague's feed that never appears in yours? What does that tell you about how algorithms personalize different worldviews?

Case snapshot: What kind of content did the algorithm never show Mariana and what difference would that have made?

E — The Logic of the Algorithm

9

If a person consumed only their colleague's feed for two years, what worldview would they likely have regarding technology, diversity, and the job market?

Case snapshot: What worldview did Mariana's feed construct over the course of two years? Was there any way for her to know she was in a bubble?

10

What type of bias did you identify in your colleague's feed—data, design, or feedback bias? Is it the same type you found in your own feed?

Case snapshot: Is the bias that affected Mariana an isolated incident or is it structural? Does the mechanism you identified in the two feeds help answer that question?

F — SYNTHESIS AND CONNECTION TO THE CASE

11

In one sentence: what discovery about the algorithm did you make by comparing the two feeds that you wouldn't have been able to see just by observing your own?

Case reflection: "When I picked up my colleague's phone, it didn't look like the same YouTube. It looked like a different country. That's when I understood what happened to Mariana." How would you complete this sentence based on your own recent experience?

Before returning the phone, share with your partner the most important discovery you made while observing their feed. Listen to what they discovered while observing yours. These discoveries will serve as the material for the Pattern Map (Phase 3.3).
